

WHAT IS CLAIMED IS:

1. A bicycle saddle having a narrow nose and a broad rear portion backwardly extended from said narrow nose, the bicycle saddle comprising:
 - 5 a shell having top and bottom surfaces;
 - a first elastic layer made of a foamed plastic material and disposed at the top surface of said shell;
 - a first covering layer completely covering on said first elastic layer and having a smooth top surface; and
- 10 a second elastic layer disposed on said first covering layer, said second elastic layer comprising a gel layer disposed on the top surface of said first covering layer and a second covering layer completely covering on said gel layer.
2. The bicycle saddle as claimed in claim 1, wherein the second elastic layer is protruded beyond the first covering layer a predetermined height.
- 15 3. The bicycle saddle as claimed in claim 1, wherein said second covering layer is made of transparent material.
4. The bicycle saddle as claimed in claim 1, wherein said second elastic layer comprises two rear mounds bilaterally symmetrically disposed at said broad rear portion.
- 20 5. The bicycle saddle as claimed in claim 4, wherein said second elastic layer further comprises a front mound disposed at said nose.
6. The bicycle saddle as claimed in claim 5, wherein both said rear mound have a front end joined each other, said front mound has a rear end connected with said front ends.
- 25 7. The bicycle saddle as claimed in claim 3, wherein said gel layer is made of

transparent gel material.

8. The bicycle saddle as claimed in claim 7, wherein said first covering layer has an inner part covered by said second elastic layer and having a first color, and an outer part exposed outside said second elastic layer and having a second color.
